	add circuit breakers	
	2 x 16 amp switches	35.00
4 x 16 amp switches	65.00	

The range of Westerly spare switch panels cover most supplied to them by **Kdd Powercentre**, also some supplied by **IYS**.

The panels have been designed for maximum flexibility, allowing for up-grading to modern power requirements. Navigation lights have a fixed layout, other sections can be manufactured to customer spec normally.

Please advise switch legends needed, normal switches have 10 amp circuit breaks, but can be fitted with 2 x 5 amp independent circuits controlled by one switch.

Where high loads, up to 55 amp required, they can be covered by remote modules that fit near battery isolator switches. They are controlled by standard switch, display power on and circuit trip as a standard unit, but save running long runs of heavy cable to switch panel and back.

Panels operating with 1, 2, both switches can be supplied with auto charging relay unit.
